Hazards identification

**Classification of the substance or mixture**

The product is an article and therefore is not subject to safety classification and labelling in accordance with EC-directives or respective national laws.

**Label elements**

Not relevant for article

**Product information**
The thermal decomposition vapours of fluorinated polymers may cause polymer fume fever with flu-like symptoms in humans, especially when smoking contaminated tobacco.

**Composition/information on ingredients**

**Article composition**

Not relevant for article

This product does not contain substances of very high concern (Regulation (EC) No 1907/2006 (REACH), Article 57).

The above products are compliant to REACH registration obligations; Registration number(s) may not be provided because substance(s) are exempted, not yet registered under REACH or are registered under another regulatory process (biocide uses, plant protection products), etc.

**First aid measures**

**Description of first aid measures**

**General advice**

Never give anything by mouth to an unconscious person. No hazards which require special first aid measures. When symptoms persist or in all cases of doubt seek medical advice.

**Inhalation**

Move to fresh air in case of accidental inhalation of fumes from overheating or combustion. Consult a physician.

**Skin contact**

Wash with water and soap as a precaution.

**Eye contact**

Flush eyes with water as a precaution.

**Ingestion**

Not a probable route of exposure. However, in case of accidental ingestion, call a physician.

**Most important symptoms and effects, both acute and delayed**

**Symptoms**

The thermal decomposition vapours of fluorinated plastics may cause polymer fume fever with flu-like symptoms in humans, especially when smoking contaminated tobacco. Symptoms may be delayed. Repeated episodes of polymer fume fever may result in persistent lung effects. Inhalation of fluorinated compounds may cause lung irritation and pulmonary oedema. Symptoms may be severe or life-threatening. Eye contact may provoke the following symptoms: Mechanical irritation of the eyes is possible. May cause skin irritation in susceptible persons.

**Indication of any immediate medical attention and special treatment needed**
**Treatment**: Treat symptomatically.

### Firefighting measures

**Extinguishing media**

Suitable extinguishing media: Carbon dioxide (CO2), Dry chemical, Foam, Water

**Special hazards arising from the article**

Specific hazards during firefighting:
- Hazardous combustion products:
  - Hydrogen fluoride
  - Acid fluorides
  - Carbon oxides
  - Sulphur oxides
- Exposure to decomposition products may be a hazard to health.

**Advice for firefighters**

Special protective equipment for firefighters:
- Wear full protective clothing and self-contained breathing apparatus. Wear neoprene gloves during cleaning up work after a fire.

Further information:
- Protect from hydrogen fluoride fumes which react with water to form hydrofluoric acid. The solid polymer can only be burned with difficulty. Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.

### Accidental release measures

**Personal precautions, protective equipment and emergency procedures**

Personal precautions: Material can create slippery conditions.

Refer to protective measures listed in sections "Handling and storage" and "Exposure controls/personal protection".

**Environmental precautions**

Environmental precautions: No special environmental precautions required.

**Methods and materials for containment and cleaning up**

Methods for cleaning up: There are no special clean-up or disposal requirements for household/industrial spills of this product.

**Reference to other sections**

Not relevant for article
Handling and storage

Precautions for safe handling

Advice on safe handling: When opening containers, avoid breathing vapours that may be emanating. Avoid breathing dust. Avoid contamination of cigarettes or tobacco with dust from this material. Provide appropriate exhaust ventilation at dryers, machinery and at places where dust or volatiles can be generated. In case of insufficient ventilation, wear suitable respiratory equipment.

Advice on protection against fire and explosion: Take necessary action to avoid static electricity discharge (which might cause ignition of organic vapours).

Conditions for safe storage, including any incompatibilities

Requirements for storage areas and containers: Store in original container. Keep in a cool, well-ventilated place. Avoid freezing temperatures. Avoid excessive heat. Keep away from direct sunlight. Protect from contamination.

Advice on common storage: Keep away from: Flammable materials Keep away from tobacco products.

Storage temperature: 2 - 50 °C

Other data: Stable under recommended storage conditions.

Specific end use(s)

Not relevant for article

Exposure controls/personal protection

Control parameters

If sub-section is empty then no values are applicable.

Exposure controls

Engineering measures: When hot processing this material, use local and/or general exhaust ventilation to maintain the concentration of vapors and fumes below exposure limits.

Ensure adequate ventilation, especially in confined areas. Good general ventilation should be provided to keep dust concentrations below the exposure limits. Local exhaust ventilation should be employed to minimize airborne contamination.

Eye protection: Wear safety glasses with side shields.

Safety glasses with side-shields conforming to EN166
Hand protection

Material: Heat resistant gloves
When handling hot material, use heat resistant gloves. Protective gloves (Type: Kevlar® - heat resistant, use possible until worn out) Please observe the instructions regarding permeability and breakthrough time which are provided by the supplier of the gloves. Also take into consideration the specific local conditions under which the product is used, such as the danger of cuts, abrasion, and the contact time.

Skin and body protection

If there is a potential for contact with hot/molten material wear heat resistant clothing and footwear.

Hygiene measures

Handle in accordance with good industrial hygiene and safety practice. Regular cleaning of equipment, work area and clothing. Do not contaminate tobacco products. Wash hands before breaks and at the end of workday. General precaution for all plastics and elastomers: Do not breathe fumes evolved from hot polymer.

Respiratory protection

When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Air purifying respirators may not provide adequate protection. In the case of hazardous fumes caused by overheating, wear self-contained breathing apparatus.

Self-contained open-circuit compressed air breathing apparatus (EN 137) Self-contained breathing apparatus (EN 133)

Physical and chemical properties

Information on basic physical and chemical properties

Form: membrane
Colour: natural
Odour: alcohol-like
Flash point: Not applicable
Thermal decomposition: 175 °C, Stable under normal conditions.

Other information

Not relevant for article

Stability and reactivity

Reactivity: No decomposition if stored and applied as directed.
**Chemical stability**: The product is chemically stable.

**Possibility of hazardous reactions**: During drying, cleaning and moulding, small amounts of hazardous gases and/or particulate matter may be released. These may irritate eyes, nose and throat. Large molten masses may give off hazardous gases. Stable at normal temperatures and storage conditions.

**Conditions to avoid**: Do not expose to temperatures above: 175 °C. To avoid thermal decomposition, do not overheat. Abnormally long processing time or high temperatures can produce irritating and toxic fumes. Stable under normal conditions.

**Incompatible materials**: None reasonably foreseeable.

**Hazardous decomposition products**: Hazardous thermal decomposition products may include:
- Hydrogen fluoride
- Alcohol fumes
- Carbonyl fluoride
- Potentially toxic fluorinated compounds
- Sulphur oxides
- Carbon oxides

**Toxicological information**

**Information on toxicological effects**

**Acute inhalation toxicity**

The thermal decomposition vapours of fluorinated plastics may cause polymer fume fever with flu-like symptoms in humans, especially when smoking contaminated tobacco.

Disposal considerations

Waste treatment methods

Product: Like most thermoplastic plastics the product can be recycled. Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Can be landfilled, when in compliance with local regulations. Incinerate only if incinerator is capable of scrubbing out hydrogen fluoride and other acidic combustion products.

Contaminated packaging: Empty containers should be taken to an approved waste handling site for recycling or disposal.

**Restrictions on use**

Do not use Chemours materials in medical applications involving implantation in the human body or contact with internal body fluids or tissues unless the material has been provided from Chemours under a written contract that is consistent with Chemours policy regarding medical applications and expressly acknowledges the contemplated use. For further information, please contact your Chemours representative. You may also request a copy of the Chemours POLICY Regarding Medical Applications and Chemours CAUTION Regarding Medical Applications.
